## Snow Baskets For Loaders

Henke's Snow basket allows you to move more snow per load than a typical loader bucket. A "rule of thumb" for determining which size is right for your loader is to multiply the size of your standard loader bucket by 2.5 - So, if you have a 3yd<sup>3</sup> bucket on your loader: 3yd<sup>3</sup> X 2.5 = 7.5yd<sup>3</sup> - Or approximately 8yd<sup>3</sup>.

### Product Features

- Available in 4, 5, 6, 8, and 10 cubic yard capacities
- All components manufactured from 100,000 psi, T-1 steel
- Significantly increases loader potential
- Weighs 40% - 60% less than typical bucket
- Gusseted horizontally and vertically for maximum support
- Reversible, 1.0" thick, bolt-on, cutting edge for Maximum wear protection
